SUMMARY

Software engineer with 2.5+ years shipping production-grade systems end-to-end. RAG pipelines, defence GCS platforms, ATS automation from customer brief to live deployment. Strong in LangChain, React Native, and system design. ₹20L+ in scaled ventures.

CORE SKILLS

- **FDE / Solutions:** Customer requirement gathering, live deployment, field-testing, product onboarding, cross-team execution
- **AI & Automation:** LangChain, LangGraph, RAG, Claude Code, FastAPI, LLM Prompting, n8n, model optimizations, evals, guardrails
- **Frontend & Mobile:** React Native, React.js, Redux, TypeScript, JavaScript
- **Backend & Data:** Node.js, Express.js, Nest.js, Python, MongoDB, MySQL, Firebase
- **DevOps & Infra:** Docker, GitHub Actions, Vercel, CI/CD, Git, System Design
- **Hardware/Field:** MAVLink, SITL, ADB Automation, Mapbox, Photogrammetry

EXPERIENCE

Botlab Dynamics Noida, India
Frontend Engineer (Software) Jun 2025 – Present

Leading development and deployment of an indigenous Ground Control System serving core product for the company's new defence vertical.

- **Deployed RAG-based document intelligence chatbot** for internal teams; owned from requirement gathering to production -> cut document analysis time by 90%.
- **Built ATS & resume evaluation pipeline** with role-specific scoring for hiring stakeholders — reduced manual screening by 70%.
- **Designed integration/config-switching system** for onboarding new defence units onto the GCS platform with zero downtime.
- **Built 3-tier QA pipeline** (2 manual + 1 automated via SITL, react-jest) ensuring reliability for defence-grade field deployment.
- **Optimised app from 289MB → 57.4MB** and CPU usage 60% → 35% for field-hardware constraints via Java multithreading.
- **Designed path-planning & terrain-mapping feature** using RNMapbox and photogrammetry for mission-critical operations.

Botlab Dynamics Noida, India
Software Engineering Intern Dec 2023 – Jun 2025

Led 60% of codebase for a TypeScript React Native GCS app; managed team of 5; key contributor to winning DRDO iDEX competition.

- **Resolved critical live-ops crash** by building custom throttling hook stabilising drone telemetry (<100ms) from Java MAVLink to React Native frontend.
- **Shipped 60+ animated screens at 60fps** using React Native Reanimated, SOLID principles, Redux, useMemo/useCallback.
- **Integrated field-critical features:** media management, screen recording, native module bindings, Mapbox visualisation.

ENTREPRENEURIAL EXPERIENCE

TravelTech & Cloud Kitchen Startups (NIT Srinagar)
Co-founder & Technical Lead2022 – 2024

- **Scaled two ventures end-to-end** system design, full-stack build (Next.js/Firebase), CMS, order flow, WhatsApp notifications.
- **Generated ₹20L+ revenue;** launched NIT Srinagar's first profitable student venture.

SELECTED SYSTEMS BUILT

- **RAG Document Intelligence Chatbot** — conversational search across uploaded docs; 90% reduction in analysis time (LangChain + FastAPI)
- **Custom ATS Evaluation Pipeline** — role-specific scoring engine; 70% reduction in manual screening
- **GCS Defence Platform** — React Native, MAVLink, Mapbox; DRDO iDEX award-winning system
- **Multi-integration Config-Switching System** — NativeModules-based onboarding for new defence clients
- **HopeVCare Website** — 20+ interdependent features (React.js + Supabase)

EDUCATION

National Institute of Technology, Srinagar Srinagar, India
B.Tech, Electrical EngineeringOct 2021 – Jun 2025

- **AIR 28, Aerothon '23** — national-level drone innovation challenge.
- **Final-year research:** optimisation algorithms in MATLAB/C++.
